Your website, from your phone

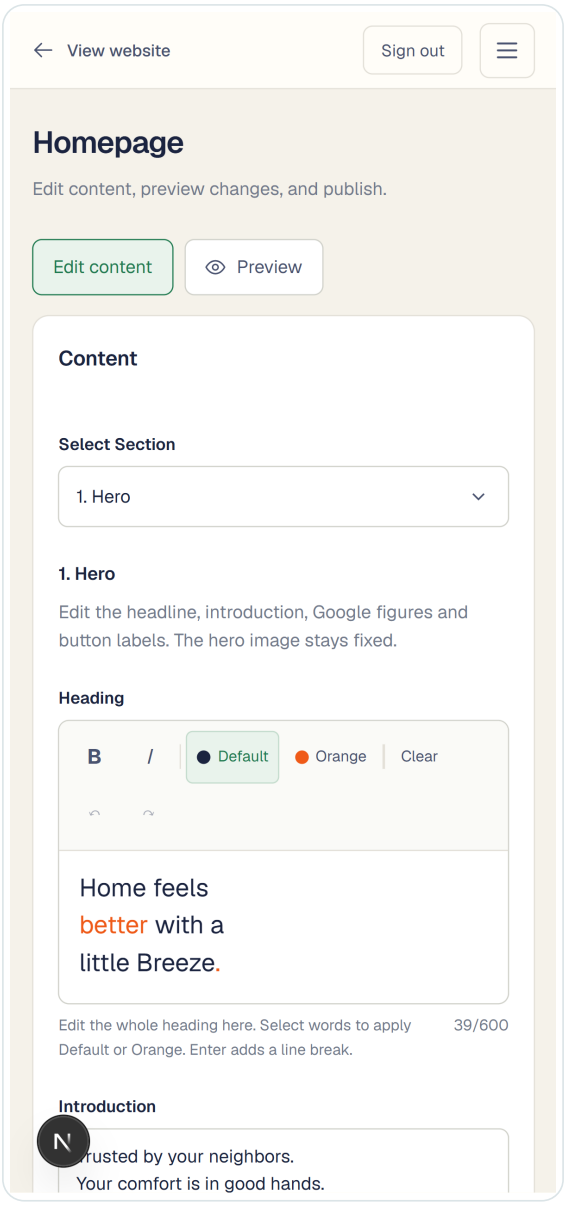

Sign in with the link and login details provided to you. These are actual CMS screens at phone size; scroll to see the rest of each form.

1 Choose a page

Tap the **menu button** at the top right. Search for a page or open a group. **Client** contains Reviews and Gallery. Tap a page to start editing; the **X** closes the menu.

2 Edit the content

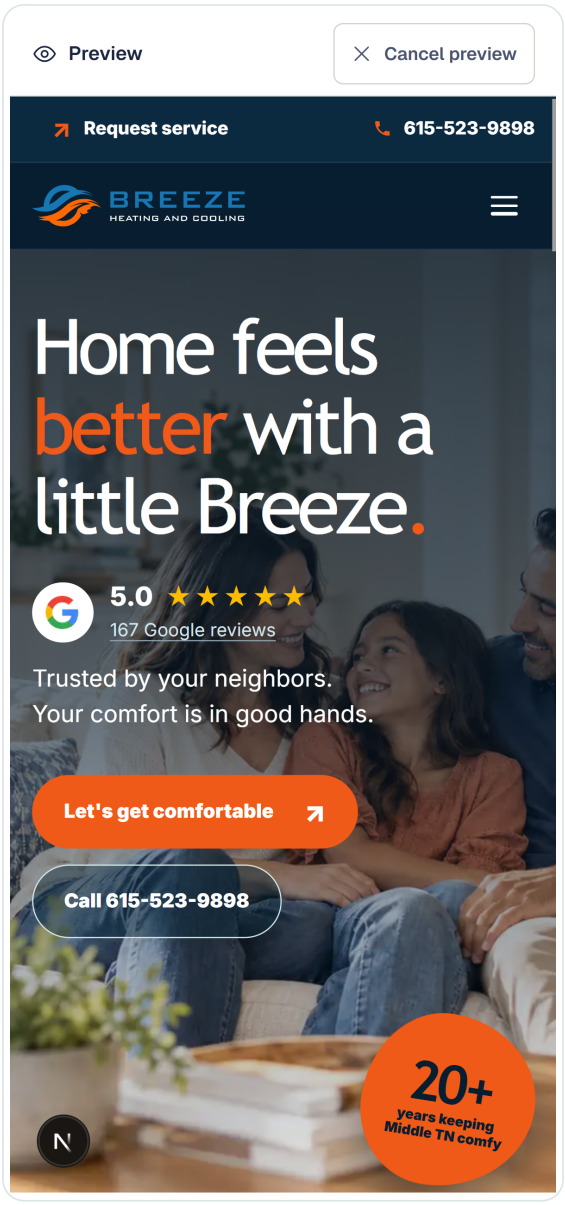

On Homepage, use **Select Section**. Edit a whole heading in one box; select words for **Bold**, **Italic** or **Orange**. HVAC and other content pages follow the same edit, preview and publish pattern.

Preview first. Publish when ready.

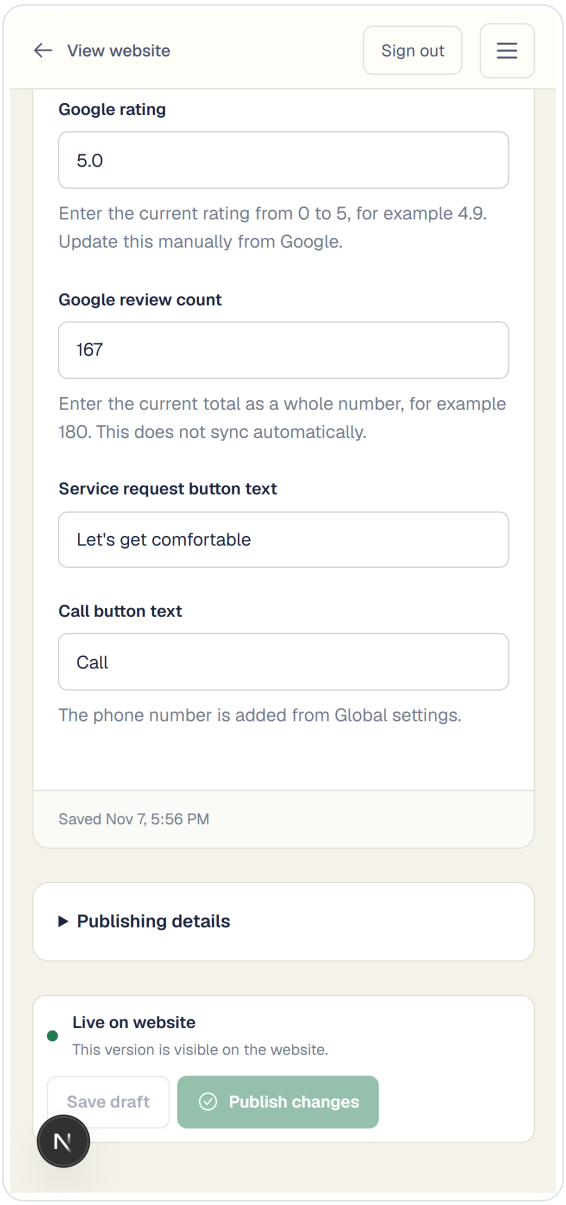

Tap the eye-marked Preview button, then Expand preview. Previewing does not save your work.

3 Check the mobile result

Scroll inside the full-screen preview to check text, images and spacing. **Cancel preview** returns to the editor with your edits intact. Use **Edit content** to keep working.

4 Finish at the bottom

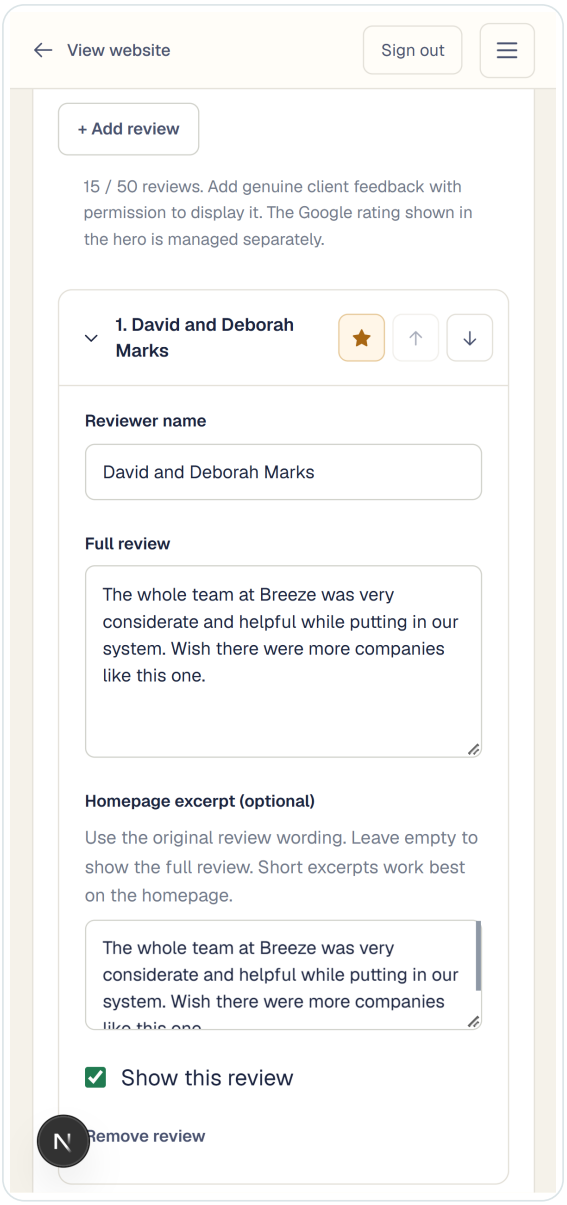

Save draft keeps changes private. **Publish changes** saves and publishes the selected page. Wait for **Live on website**, then check **View website**. The buttons are disabled here because there are no new changes.

Reviews and gallery photos

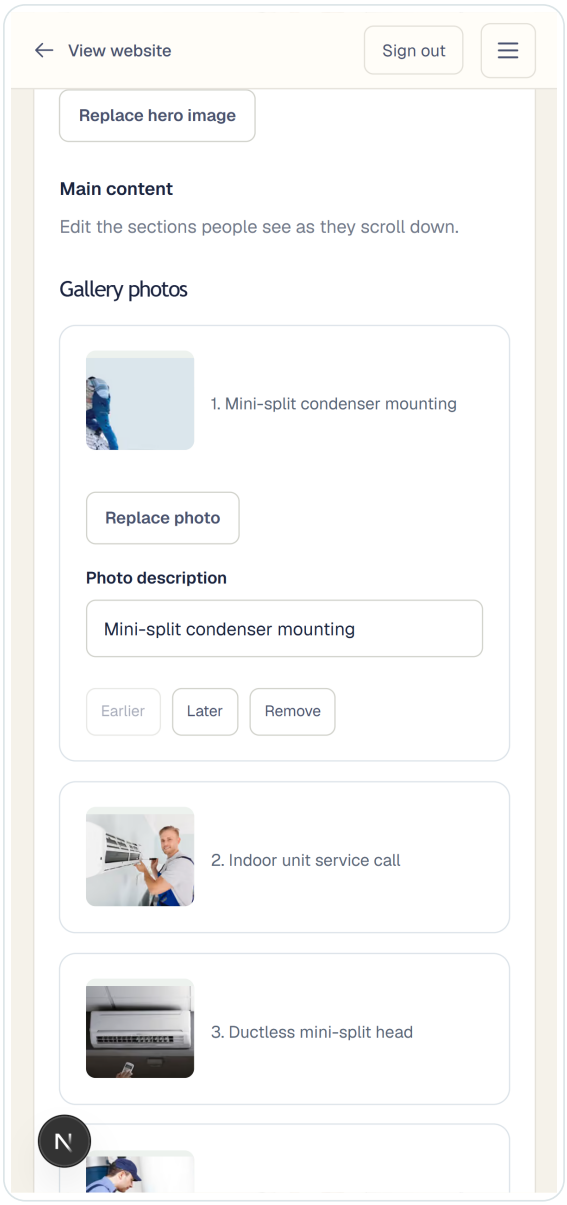

Both live under Client in the menu. Open an existing item to edit it, or use the Add button for a new one.

5 Manage customer reviews

Use **Show this review** for visibility. Star up to **three** visible reviews for the homepage; arrows set their order. Enter the full review and an optional homepage excerpt. Publish the Reviews page when finished.

6 Choose and arrange photos

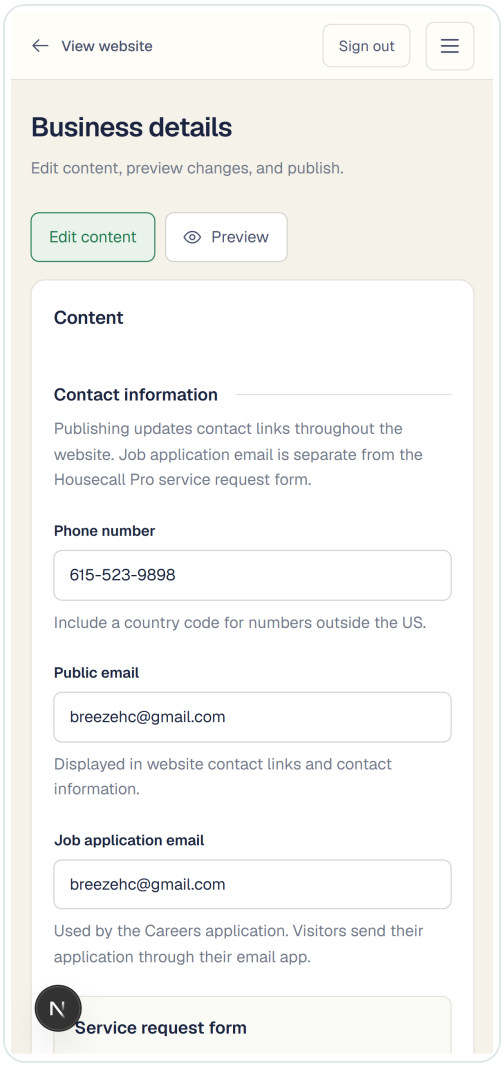

Use **Choose photo** or **Replace photo**. Select an existing image, or upload one and then select it. Update **Photo description**; **Earlier / Later** changes the order. Save or publish afterwards. JPEG, PNG, WebP or AVIF; up to 10 MB.

Business details and quick help

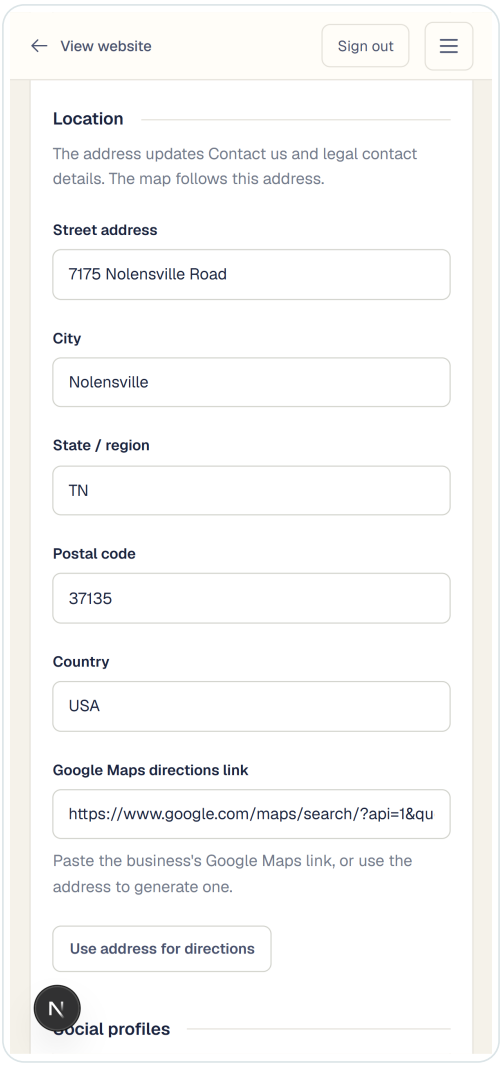

Business details is one scrolling form. Its changes are shared across the website.

7 Update contact information

Edit the public phone and email here. **Job application email** is for Careers; service-request notifications are managed in **Housecall Pro**. Continue down for social profiles and shared website text.

8 Check the location

Update the address and directions link. **Use address for directions** builds that link. The homepage **Service area > Map location** is separate. Preview the relevant area, then publish Business details.

> **Before leaving:** save your draft. If a preview fails, try **Reload preview**. For a save or publish error, read the message and use **Check status** before retrying. Sign out when finished.
