Website admin manual

A short guide to everyday updates. Learn the workflow once, then use it across your website.

Choose a page | **Edit content** | **Preview** | **Save or publish**

1. Find your page

Sign in using the admin link and login details provided to you. Choose a page from the left menu, or use **Find a page**. On a phone, open the menu button in the top-right corner.

Homepage	Choose the section you want to edit.
HVAC	Open Services overview or an individual service page.
Client	Manage **Reviews** and **Gallery**.
Business details	Update contact information, location and shared website text.

2. Edit a page

HVAC pages share the same editing pattern: open **Page content**, update the introduction and main content, then check the preview. About us, Emergency, Promotions and Legal use familiar fields too, so follow the labels rather than a separate set of steps for each page.

Open a row to edit its contents. Where available, **Earlier**, **Later**, **Add** and **Remove** manage repeated items. **Search settings** contains the search title and description; leave the existing text if you are not changing it.

3. Preview, then finish at the bottom

- Use the eye-marked **Preview** controls to check your draft. Check the mobile layout too. On a phone, **Expand preview** fills the screen; **Cancel preview** returns to the editor.
- Scroll to the bottom. **Save draft** keeps your work private for later. **Publish changes** saves your latest edits and updates the selected page, including its edited sections.
- Wait for **Live on website**, then use **View website** to check the public result in a new tab.

> **Before switching pages or signing out:** save your draft. A preview does not save anything; unsaved changes are only in the editor.

Homepage, reviews & photos

These areas have a few controls worth learning.

Homepage: choose one section at a time

Use **Select Section** to find Hero, Heating & cooling, Contact introduction, Reviews or Service area. The numbered order follows the website, and the preview moves to the selected section.

- Edit a complete heading in its single text box. Select words, then use **Bold**, **Italic**, **Default** or **Orange** where the toolbar is available. Enter adds a line break.
- The Hero's **Google rating** and **review count** are entered manually. They are separate from the review library. The homepage artwork is managed by your website provider.

Reviews: the library and homepage stars

Open **Client > Reviews**. Expand a review to edit it, or choose **+ Add review**.

- Enter the reviewer name and full review. **Homepage excerpt** is optional; leave it empty to use the full review. Keep any excerpt in the reviewer's original wording.
- Turn **Show this review** on or off to control visibility. Star up to **three** visible reviews for the homepage. Use the arrows beside starred reviews to set their order.
- Visible reviews appear on the website's Client page. The Homepage Reviews section edits the section heading; the review cards themselves are managed here. Publish the Reviews page when finished.

Gallery and images: upload, then select

Open **Client > Gallery**, expand a photo, or choose **+ Add photo**. Use **Choose photo** or **Replace photo** to open the picker.

- Choose an existing image, or use **Upload images**. Wait until the upload is ready, then click the image to select it. Uploading alone does not add it to the page.
- Update its caption and use **Earlier** or **Later** to reorder gallery photos. Removing a photo from a page keeps its original file in the library.
- Where a **Hero image** control is available, use **Replace hero image**. Pick a wide photo and check the crop on mobile. **Restore default hero** returns to the original image.

> **Image formats:** JPEG, PNG, WebP or AVIF, up to 10 MB each. After selecting or replacing images, save the draft or publish the page.

Business details & quick help

Use shared settings for information that appears in several places.

Business details: one continuous form

Contact information	Edit the phone number and public email used across the website. **Job application email** is for Careers applications. Service requests and their notifications are managed in **Housecall Pro**.
Location	Update the business address and Google Maps directions link. **Use address for directions** generates a link from the address. The homepage **Service area > Map location** is separate and can show a wider region.
Social profiles	Choose each platform and enter the full HTTPS address of your business profile. These links appear in the footer.
Shared website text	Edit the **Contact banner** and **Service callouts** used across the website. Check the wording wherever it appears.

Use the preview's area buttons, such as **Footer**, **Header** or **Contact location**, to check the result. Publish **Business details** to apply these shared changes.

If something does not look right

- **The change is only saved as a draft:** choose **Publish changes** when ready. A saved draft is not yet visible to visitors.
- **The preview will not load:** choose **Reload preview**. An incomplete or invalid edit may leave the last valid content showing; complete the fields before checking again.
- **A save or publish action shows an error:** read the message and use **Check status** before trying again. Keep your edits open while checking.
- **The publication is saved but its website refresh is pending or failed:** open **Publishing details** and use **Retry website update** when available.

Finish and get help

After checking your changes, use **Sign out**, especially on a shared computer. For help, send the page name, what you were trying to change and the message shown.
